

In the Claims:

- 1.(currently amended) An aerosol product comprising a sealed metal canister containing an aerosol composition comprising an oxidase enzyme and a substrate for said oxidase ~~the~~ enzyme.
- 2.(currently amended) An aerosol product according to ~~is claimed in~~ claim 1 wherein the aerosol composition additionally comprises catalase.
- 3.(currently amended) An aerosol product according to claim 1 as claimed in either claim 1 or claim 2 wherein the aerosol composition comprises >50 ppm of water.
- 4.(currently amended) An aerosol product according to claim 1 as claimed in either claim 2 or claim 3 wherein the oxidase enzyme is glucose oxidase and the substrate is D-glucose.
- 5.(currently amended) A method of deoxygenating an aerosol product comprising the step of:  
supplying to filling an aerosol canister ~~with an aerosol composition, an oxidase enzyme and a substrate for the oxidase enzyme, an aerosol composition, and a propellant and thereafter, and, in any order, filling the aerosol canister with propellant, and sealing the aerosol canister.~~
- 6.(currently amended) A method according to ~~as claimed in~~ claim 5 wherein the method further includes supplying additionally a catalase to ~~is added to~~ into the aerosol canister.
- 7.(currently amended) A method of inhibiting corrosion of a sealed and pressurized aerosol canister containing which method comprises the step of:

providing an aerosol composition comprising an oxidase enzyme and a substrate for the oxidase enzyme as a corrosion inhibiting system to the said aerosol canister for aerosol products.

8.(currently amended) A method according to claim 7 wherein the aerosol composition additionally comprises a Use of an oxidase enzyme and a substrate for the oxidase enzyme, as claimed in claim 7, in combination with the catalase.

9.(new) An aerosol product according to claim 2 wherein the aerosol composition comprises >50 ppm of water.

10.(new) An aerosol product according to claim 2 wherein the oxidase enzyme is glucose oxidase and the substrate is D-glucose.
